A drug calculation test is an examination of your ability to efficiently work through the mental arithmetic associated with administering drugs to patients. You are working with dosage formulas, weights and volume, translating different types of measurements and working out dosage schedules. During the test, calculators are not permitted, so you must rely on yourself to make the accurate calculations.

We both know that you didn't get into nursing to do Maths, you got into nursing to help people, but we also understand why getting the calculations right is important. If we are honest, we know that some people find Maths easier than others, and if you are one of those people who have always struggled with it, then the prospect of needing to learn yet more Maths for your professional practice may fill you with dread. At [mathsforurses.com](http://mathsforurses.com) we believe that anyone can succeed with Maths. What you need is for somebody to take you through the ideas one step at a time, to explain to you why things work the way they do, to link the principles that you are learning to real-life contexts and to give you plenty of opportunities to practice, with guidance as you go. That's what we have created the Maths for Nurses book to do. Each chapter of the book focusses on just one Mathematical idea and doesn't take any prior knowledge for granted. In the first section of the book, the basics of numeracy are covered with chapters on place value, calculations, rounding, converting units, using fractions, converting between fractions, decimals and percentages, using percentages and ratio. In each chapter, the ideas are explained thoroughly in a clear and easy-to-follow way. Methods are demonstrated with worked examples and then followed with 'Have a Go' questions for you to put into practice what you have learned. One of the free bonus materials that

you get when you buy the book is access to a fully worked solution to every practice question, so if you ever get stuck you can see what your next step should be. Once you have completed a chapter, you will find a further exercise with 10 more practice questions for you to put your newly developed skills to use. The second section of the book focusses on the application of these skills in a nursing context, with chapters on calculating dosages, oral dosages, intravenous dosages, dosage per weight, multiple doses, infusion rates, fluid balance and burns. Again, you will find clear explanations, step-by-step examples, 'Have a Go' questions as you learn and Practice Questions at the end of each chapter, with access to fully worked solutions to every question. At the end of each section of the book, you will find a collection of practice exam papers for you have a go at and put your skills to the test. The first collection contains four practice basic numeracy papers that examine the skills developed in the first part of the book. The second collection is made up of four practice drug calculations papers that focus in on the applied skills of section two of the book, and that replicate the kinds of calculation that you will be called upon to make in your nursing practice.

This new edition of Drug Calculations for Nurses teaches healthcare professionals how to perform drug calculations with confidence and competence. It provides step-by-step guidance to carry out accurate drug calculations, with units and drug strengths clearly explained. This bestselling pocket-size book begins with the basic mathematical skills required to perform calculations, including tips on estimating answers. It then covers drug strengths and concentrations, dosage calculations, IV infusion therapies, and pharmacodynamics and pharmacokinetics. Separate chapters focus on children, adults and the elderly, addressing specific challenges encountered in these populations, with new content on pregnancy, and renal and liver function. Helpful worked examples, key points, and objectives are included in every chapter, and this new edition

Incorporating the ratio and proportion, formula, and dimensional analysis methods, this online course presents a step-by-step approach to the calculation and administration of drug dosages. This Drug Calculations Online course is designed to be used with the 4th edition of Gray: Calculate with Confidence. Once students have read topics in the text, the online course provides them an opportunity for application and practice. Animations, voice-overs, and interactive self-assessment activities are used to provide an engaging and interactive course platform for students. This course includes practice problems to promote active learning and quizzes that instructors can use to evaluate students' understanding of content presented in the course. A comprehensive test bank of approximately 300 questions is also provided for instructor's to build quizzes and test. Includes three major drug calculation methods (ratio and proportion, formula (2 types) and dimensional analysis) to give students the option of choosing the method which works best for them. Each module is organized by topic sections that include an overview, objectives, a reading assignment for the topic being covered, example problems, practice problems, and one or more quizzes. Follows recommendations from the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) and the Institute for Safe Medication Practices (ISMP) for use of acceptable abbreviations and dose designations. Many of the math practice problems include a tutorial for each of the three drug calculation methods. When one of the solution buttons is chosen, a step-by-step tutorial to solving the problem in the method chosen is initiated for the student to view. Animations are used throughout this course to demonstrate various concepts related to dosage calculation and drug administration. Some animations will require student participation such as using the mouse to move the plunger on a syringe. Interactive self-assessment activities related to various topic areas are incorporated throughout the course to allow the

student to apply their knowledge in context. Voice-overs are used throughout the course to enhance the step-by-step explanation of medication administration procedures and the drug calculation methods demonstrated throughout the course. Quizzes are included within each module that instructors can use to evaluate students' understanding of all the major topics covered in that particular module. A comprehensive test bank of approximately 300 questions, organized by module, will be provided for instructor's to build quizzes and tests. Terminology is defined within the content for easy reference. Provides the latest drug administration techniques and devices and detailed explanation of the various forms of administering drugs, including oral, intravenous, intramuscular, subcutaneous and other routes used in drug administration. This allows the student to become more knowledgeable about the specifics of each technique. Includes the most up-to-date, commonly used drugs so students have exposure to what is being used in the "real world" of clinical practice. Presents information on infusion pumps (enteral, single, multi-channel, PCA and insulin) to help students understand their increased use in drug administration. Drug Calculations Online to accompany Calculate with Confidence is a NEW drug calculations online course!
