linearalgebras.com Chapter 1 Exercise B - Solutions to Linear Algebra Done Right Linearity 2 minutes 1. Solution: By definition, we have $(\mathbf{0}) + (\mathbf{0}(\mathbf{0})) = \mathbf{0}$ and $+(\mathbf{0}) = \mathbf{0}$. This implies both and $\mathbf{0}(\mathbf{0})$ are additive inverses of $\mathbf{0}$, by the uniqueness of additive inverse, it follows that $\mathbf{0}(\mathbf{0}) = \mathbf{0}$.

Solution: We show that if $b = c = 0$,
then T is linear. Let $f, g \in P(\mathbb{R})$, then
we have $(f + g)(4) = f(4) + g(4)$
and $(f + g)'(4) = f'(4) + g'(4)$. It
is easy to check. Moreover, by linearity
of integration, one has $\int_1^3 (f + g)(x) dx = \int_1^3 (f(x) + g(x)) dx$
 $= \int_1^3 f(x) dx + \int_1^3 g(x) dx$. By the above, it follows that $T(f + g) = (3(f + g)(4) + 5(f + g)'(6), \int_1^3 (f + g)(x) dx) = (3 \dots$

~~Solving this system of equations, we have $a = \begin{bmatrix} 1 \\ x \\ y \end{bmatrix}$, $b = \begin{bmatrix} 1 + x \\ y \end{bmatrix}$, $c = \begin{bmatrix} 1 \\ x + y \end{bmatrix}$. It is clear that scalars a, b, c are not all zero because $b + c = \begin{bmatrix} 1 \\ x + y + y \end{bmatrix}$. Hence w_1, w_2, w_3 are linearly dependent as well. Suppose the system $v_1, v_2, \dots, v_r, v_{r+1}$ is linearly dependent, we argue it by contradiction.~~

Denote the set in question by A in each part. (a) Let $v, w \in A$, $v = (x_1, x_2, x_3)$, $w = (y_1, y_2, y_3)$. Then $x_1 + 2x_2 + 3x_3 = 0$ and $y_1 + 2y_2 + 3y_3 = 0$, so that $0 = x_1 + 2x_2 + 3x_3 + y_1 + 2y_2$

 $+ 3y^3 = (x_1 + y_1) + 2(x_2 + y_2) + 3(x_3 + y_3)$, so $v + w \in A$. Similarly $0 = a_0 = ax_1 + 2ax_2 + 3ay_3$, so $av \in A$.

not yet very familiar with abstract reasoning, is willing to study more rigorous mathematics than what is presented in a "cookbook style" calculus type course.

~~Linear Algebra Done Wrong~~ — Brown University

Clearly $F_3 = U_1 + U_2 + U_3$ because an arbitrary vector $(x, y, z) \in F_3$ can be written as $(x, y, z) = (x, y, 0) + (0, 0, z) + (0, 0, 0)$, where the first vector on the right side is in U_1 , the second vector is in U_2 , and the third vector is in U_3 . However, F_3 does not equal the direct sum of U_1, U_2, U_3 because the vector $(0, 0, 0)$ can be written in two different ways as $u_1 + u_2 + u_3$, with each $u_j \in U_j$.

~~Linear Algebra: Finding the Complete Solution - YouTube~~

The text focuses on the central goal of linear algebra: understanding the structure of linear operators on finite-dimensional vector spaces. The author has taken unusual care to motivate concepts and to simplify proofs. A variety of interesting exercises in each chapter helps students understand and manipulate the objects of linear algebra.
